

## SERVICING REMOTE SITES

Mining and mineral processing facilities are, by nature, often very remote sites requiring fly-in fly-out operations or difficult and protracted means of getting there.

Thorburn Australia has many years of experience servicing remote sites either by local visits or via electronic connections through the internet or private connections.

Using virtual network software, control systems can be remotely monitored, maintained and modified without the need for expensive site visits.

Whether your site is in the isolated reaches of Australia or simply removed from the nearest capital city, Thorburn Australia can help you. We have serviced sites as far away as:

- Weipa
- Nhulunbuy
- Normanton
- Mount Isa
- Phosphate Hill
- Cobar
- Fiji
